PERSONAL STATEMENT

I'm self motivated and self taught with a focus towards front end technologies. I've spent the last few years working as a javascript developer at Wren Kitchens dedicated to learning as much as I can about the industry.

PROJECTS

Verrdi Transport Support Services

<https://www.verrdi.co.uk>

A website built around supplying CPC courses to HGV drivers.

Mulberry Fitted Kitchens

<https://www.mulberrykitchens.co.uk>

A brochure website with integrated CMS for easy updating.

F1 Calendar

<https://fathomless-ocean-33259.herokuapp.com>

Upcoming Formula 1 race dates and times with results for past races.

EDUCATION

Agile Business Consortium — [Scrum Master Certification](#)

While at Wren I had the opportunity to undertake the above scrum master training. The course provided us with a good understanding of how to effectively lead a team as scrum master.

Free Code Camp — [Front End Development Certification](#)

Free Code Camp covered HTML, CSS and Javascript. To earn their certification, they had me complete a number of projects which can be viewed from my portfolio.

SKILLS

HTML, CSS, Javascript,
Typescript, React, Redux,
Gatsby, GraphQL, Node.js,
express.js, mongodb, git

EMPLOYMENT HISTORY

Wren Kitchens — JavaScript Developer

FEBRUARY 2020 - PRESENT

I started at Wren on their graduate scheme. I'm grateful for the opportunity to advance and learn about what it takes to work on a complex product both as a developer and a team lead.

Key responsibilities

- Lead / participate in scrum ceremonies as scrum master.
 - Daily Standup, Backlog Refinement, Visioning, Retrospective, Sprint Planning, Sprint Review.
- Contribute clean, efficient code to planner2d, a CAD and compliance system for designing kitchens.
 - Mostly JavaScript, TypeScript, ReactJS
- Troubleshoot, debug and upgrade existing code.
- Peer review colleagues code to ensure it adheres to coding standards.
- Plan and deploy the completed work from within the team.
- Onboard new team members by making sure they understand Wren's business processes and helping them get up to speed in the new codebase.

Key achievements

- Played a key role in transforming a team from underperforming to consistently achieving the highest sprint scores across all of the development teams.
- Promoted to team lead as a junior developer, which led to learning a lot about team leadership and business processes in a short amount of time.

Mulberry Fitted Kitchens

AUGUST 2006 - FEBRUARY 2020

Mulberry is a small company and I found myself filling any role when needed, which I have listed below.

Key responsibilities

- Solely responsible for Mulberry's web presence.
 - Built their website.
 - Set up social media accounts.
 - Set up Google My Business and enabled reviews.
- Designing all advertisements Mulberry needed for any campaigns they decide to run.
- Answer phone calls.
- Greet and answer questions from customers browsing the showroom.

- Handle all incoming invoices and enter them into our system.
- Take incoming deliveries to the warehouse and sort them into their proper place.
- Assist the delivery driver with any deliveries that require two people.

Key achievements

- I had the opportunity to update Mulberry's website for them which can be viewed in my portfolio. Their previous site was not responsive and while it was once perfect for them, it had not kept up with the latest screen resolutions and had started to show its age.
- I worked alongside a director to design a virtual reality headset very similar to google cardboard. They hand out the headsets to prospective clients so they can view their kitchen design in VR.
- Developed a quicker solution for entering all of their invoices using Microsoft Access, saving many hours of manual work for the directors.
